Profile

A Mobile App Developer with over 4 years of hands-on experience in building user-friendly and scalable mobile applications using **React Native**. Proficient in **TypeScript** for writing robust and maintainable code. Skilled in **Redux** for state management, **Firebase** for backend integration (including authentication, notifications, and deep linking), and creating responsive UIs using modern libraries. Experienced in handling background operations, integrating REST APIs, and working with **sockets** for real-time features. Possesses a strong learning mindset and a passion for building intuitive, high-performance apps. Combines creativity with problem-solving skills, pays close attention to detail, and thrives in collaborative, fast-paced team environments.

Professional Experience

Mobile App Developer <i>Storewide Active Intelligence</i>	Nov 2024 – present Bangalore, India
Mobile App Developer <i>Imfacto DigiFin</i>	May 2024 – Nov 2024 Bangalore, India
Mobile App Developer <i>Skiivia Innovation</i>	Jul 2022 – Mar 2024 Chandigarh, India

Education

Masters of Computer Application (MCA) <i>Kurushetra University</i>	2024 – present
Bacholores <i>Allahabad State University</i>	2021 – 2023

Projects

Qwik 📄 <i>Loan for all (Under development)</i> This application is designed to provide student loans to university students in the U.S., especially those with low or limited credit (CIBIL) scores. It features a robust KYC verification system, real-time location tracking, and seamless credit score checks to ensure secure and responsible lending. In addition to lending, the app includes tools for expense management and personalized credit-building guidance to help users improve their financial profiles. Users can access both virtual and physical credit cards issued through the app, enabling secure and flexible spending. The platform also supports QR-based transactions for fast and convenient payments.	Mar 2025 – present
Couple Bible 📄 <i>A Spiritual Connection and Learning Platform</i> The app combines spiritual guidance with modern technology to create an immersive and meaningful experience for individuals and couples seeking to strengthen their faith and biblical understanding. Whether users are looking for daily inspiration, deep biblical study, or ways to grow spiritually with their partner, Bible Bonding provides the tools and content to support their journey.	May 2025 – Jan 2026

AI-powered conversational data analysis (Under development)

This mobile application lets users explore and understand their data through natural-language conversation. Users can securely connect their own databases (configuring connection type, host, and credentials) or upload spreadsheet and Excel datasets, then ask questions in plain English and receive instant, AI-generated insights rendered as richly formatted, Markdown-based responses. The app organizes every analysis into chat threads with full conversation history, and lets users manage multiple database connections and uploaded data collections from an intuitive drawer-based interface. It features secure authentication through single sign-on (AWS Cognito) alongside email/password login, push notifications via Firebase Cloud Messaging, multi-language localization, and over the-air updates for instant feature delivery without app-store releases. Built with React Native on the New Architecture and a Redux-managed state layer, it runs natively on both Android and iOS.

DigiApp

May 2024 – Nov 2024

Payment Gateway (TRINIDAD AND TOBAGO)

This is a payment gateway app for a Trinidad and Tobago bank. The app is built using the latest React Native version 0.73 with Redux Toolkit for state management. It is available on both Android and iOS platforms. The app includes an authentication flow with notification deep linking, QR code generation and scanning, allowing users to complete payments via QR code in less than 10 seconds. It also supports document upload for loan creation using multipart file uploads, and includes a PDF view for loan. Also written Unit test cases in Jest .

SAI Alerts

Aug 2022 – Mar 2024

(Iceland Store Management)

The SAI Alerts app takes the data gathered by the platform and turns it into actionable insights for store managers, colleagues and security officers. The return on investment is compelling and the improvements in store operations are immediate. The SAI Platform is an industry leading machine vision platform tailored for the challenges of retail. Using feeds from existing in-store cameras, retailers can measure, deter and ultimately prevent losses throughout the store, including at assisted and self-service checkouts.
